THE STONE-MALLORY MATHEMATICS FOR EVERYDAY USE

A Textbook in General Mathematics for High Schools

By John C. Stone and Virgil S. Mallory
State Teachers College, Montclair, New Jersey

The conventional courses in high school mathematics,—algebra, geometry, etc.—are designed as preparatory mathematics for college entrance and for further study of mathematics or its related subjects.

Today there are many high school students who are not interested in such courses and often their time is wasted if they attempt them. The authors have for many years given the problem serious thought and have conducted experimental courses in order to determine the kind of work that is most interesting to, and most valuable for, such students. First of all it is clear that the work must be

INTRINSICALLY INTERESTING AND OF EVIDENT WORTH

This is the keynote constantly in mind in the making of this new textbook in MATHEMATICS FOR EVERYDAY USE. Both **Interest** and **Evident Worth** are secured through attractive pictures and historical notes; through an opportunity for activity; through the development of self-reliance, and an appreciation of accuracy and clear thinking; and in many other striking ways.

Flexibility and constant challenge to the student are other outstanding features.

Teaching Methods and Testing Materials in Business Mathematics

By

R. Robert Rosenberg

This volume definitely represents a milestone in methods for business arithmetic. This one book establishes the author as one of the most important and most constructive contributors to methods in the subject. It contains two hundred and sixty-six pages of teaching methods, teaching plans, achievement tests, survey tests, final examination problems, and two hundred classified general review problems and answers.

We expect it to meet with immediate favor in the profession, and to become one of those methods books that you will find on the desk of every ambitious teacher.

An investment in this volume will pay dividends to even the most experienced teachers.

Positions always open for Teachers

The opening of schools does not close the door of opportunity to teachers. Probably no school day passes without the need developing for a new teacher in some school or college.

All available teachers should find it profitable to keep in touch with schools over a wide area in order to assure themselves of immediate information about all openings that develop. This can best be done through a well established teachers' agency.

The Southern Teachers' Agency has been in continuous operation for thirty-four years. It covers all southern states and most states bordering the South. It is a charter member of the National Association of Teachers' Agencies. Four closely co-operating offices are operated under one general management.

All teachers who are available now or who will be available Christmas or at any time during the year are cordially invited to write for details.
